DETAILED ACTION

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings are informal. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards.

The Edwards reference discloses a drywall tool comprising a body 21 having a distributing surface (outer surface of elements 90 and 91), a rear surface (inner surface of elements 90 and 91), a recess 35, and an orifice 45, a retainer comprising a first rotatable member 130 and a second rotatable member 131 each having non-uniform cross sections, angularly spaced axes, and surfaces which are spaced farther from an

axis of the recess as the members are rotated, a handle 37 having a rotatable connector 38 and capable of delivering fluid to the orifice.

Allowable Subject Matter

Claims 11-20 are allowed.

Claims 5-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Mower reference discloses a similar drywall corner finisher with a ball joint connection between the handle and the applicator. The Springborn reference discloses a similar ball joint connection.
